ANNEX II : TECHNICAL SPECIFICATIONS

1. The bars, angles and plates shall (a) conform in all respects to the latest edition of British Standard 4360 or equivalent, (b) be well and clearly rolled up to the required dimensions, sections and weights. They shall be sound and free from such segregations, cracks, laminations or surface flaws as might prevent their use for the intended purpose. All items except the steel plate shall be from 3 metres (10') to 6 metres (20') long.

2. Scope

The British Standard quoted above applies to weldable steel having minimum tensile strengths of 26, 28, 32 and 36 tons per square inch for general structural and engineering purposes. The steel must be equally suitable for bolted or riveted structures. The standard includes hot rolled hollow sections except that those formed from plates and subsequently metal-arc welded are covered only in regards to the plate material from which they are formed.

3. Chemical Composition

The chemical composition is to be based on the Ladle Analysis while the product is to conform to the table specified in BS 4360. Mild steel plate having a thickness less than 3mm must comply with the latest edition of BS 1449 Part 28.

4. The name and address of the manufacturer and the country where the goods will be manufactured shall be furnished. Failure to give this information may involve non-consideration of the tender. The relative standard shall be quoted. Full specifications of the product offered shall also be submitted.
